

A high precision measurement of the W mass at CMS

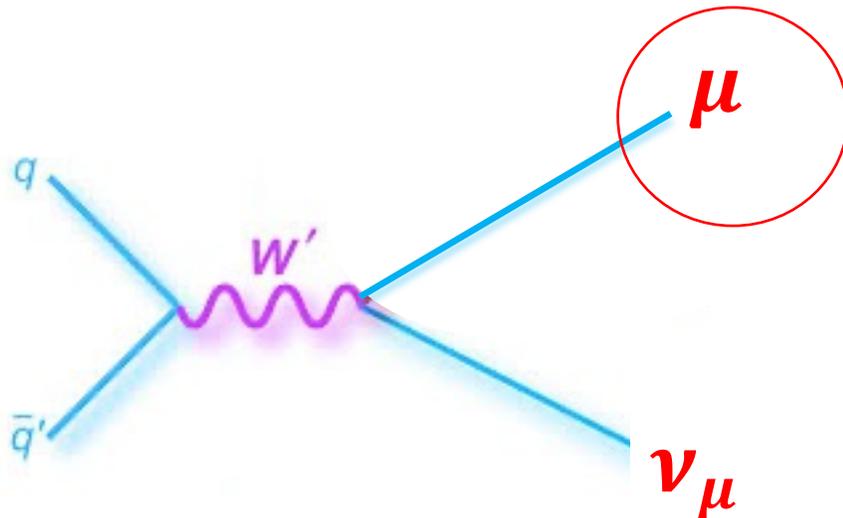

W mass:
80360.2 ± 9.9 MeV

CERN seminar:

<https://indico.cern.ch/event/1441575/>

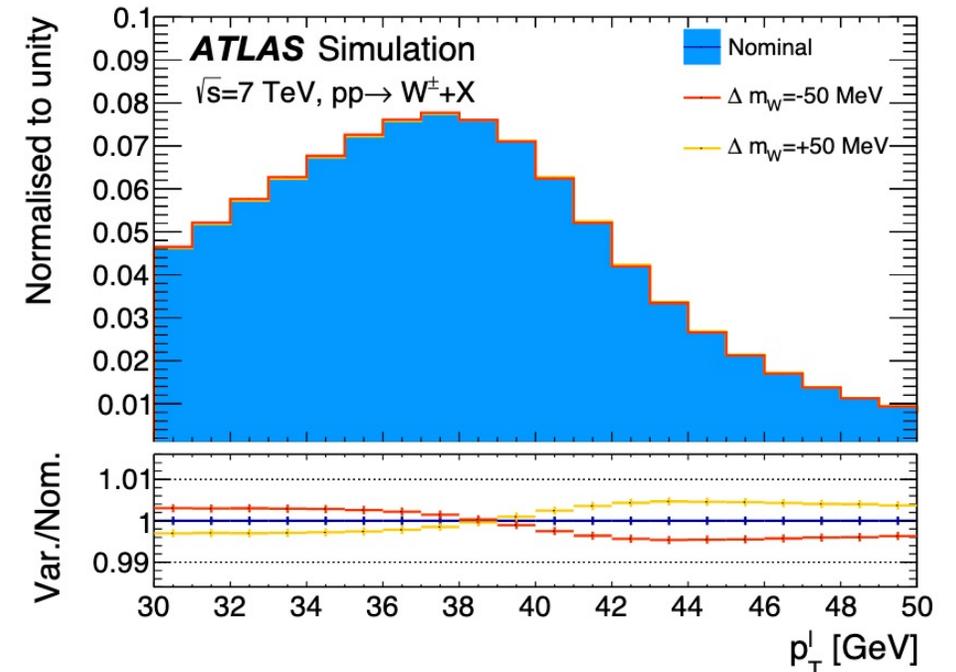

CERN press release:

m_W is sensitive to 0.1% level variations in templates

Need to measure precisely → complex calibration techniques

Extreme control needed over all experimental and theoretical aspects

CMS Preliminary

LEP combination
Phys. Rep. 532 (2013) 119

CMS
This Work

- This is the first m_W measurement from CMS
- Measurement is performed with $\sim 10\%$ of Run 2 data
- Major advances in experimental and theoretical techniques form the basis for further improved precision and additional measurements in the future

Welcome to the 17th International Workshop on Top Quark Physics (TOP2024)

The 17th International Workshop on Top Quark Physics (TOP2024) will be held in person, from **September 22 to 27, 2024, in Saint-Malo, Brittany, France.**

TOP2024 brings together experimentalists and theorists to present and discuss the latest developments in top-quark physics. Young scientists are especially encouraged to participate.

Starts Sep 22, 2024, 5:00 PM

Ends Sep 27, 2024, 2:00 PM

Europe/Paris

17th International Workshop on Top Quark Physics

September 22 to 27
Saint-Malo, France

State-of-the-art MC: improved FxFx merging

- NLO QCD FxFx@2j + NLO EWK
- MadGraph with new FxFx merging (JHEP11(2023)029)

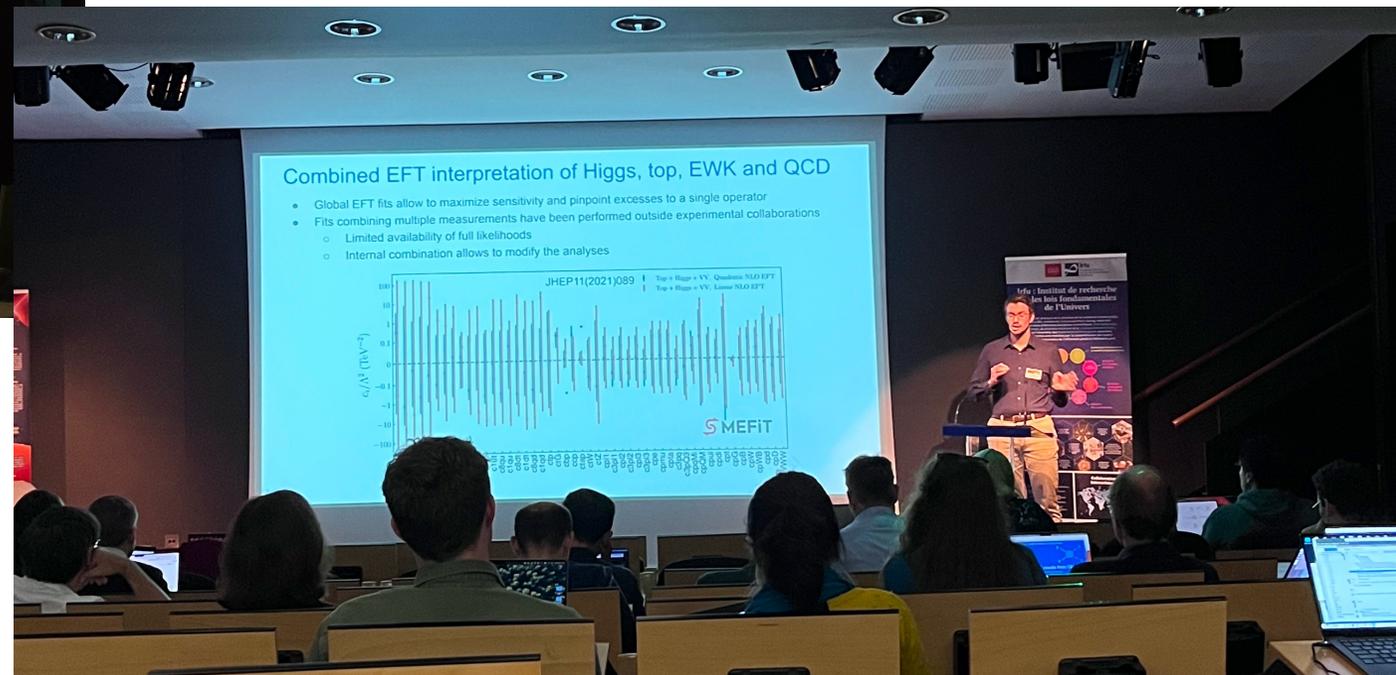

- treats EWK jets by ME below merging scale.
- better description of low p_T jets
- Many other ongoing efforts

TOP 2024: HW YSF

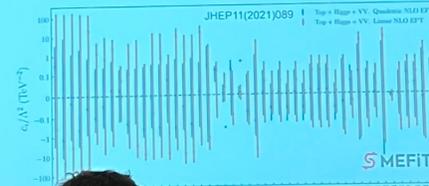

International Workshop on Top Quark Physics (TOP2024)

International Workshop on Top Quark Physics (TOP2024) will be held in person, from

Combined EFT interpretation of Higgs, top, EWK and QCD

- Global EFT fits allow to maximize sensitivity and pinpoint excesses to a single operator
- Fits combining multiple measurements have been performed outside experimental collaborations
 - Limited availability of full likelihoods
 - Internal combination allows to modify the analyses
